

# 4 REASONS NOT TO BUY TONER CLONES

## FOR YOUR PRINT CARTRIDGES **NEW ISN'T ALWAYS BETTER THAN REMANUFACTURED**

DID YOU KNOW

### 1 | **SURPRISE! THERE ARE HIDDEN COSTS TO BUYING CHEAPLY MANUFACTURED CLONE CARTRIDGES!**

The low costs of new build clones are a result of using cheaper plastics with inferior quality in the manufacturing process of the cartridge. This decreases reliability of the toner cartridges, causing more printer issues and ultimately increasing your printer repair costs in the long run.

### 2 | **CLONES MIGHT BE CHEAP AT FIRST BUT HAVE AN OVERALL HIGHER COST OF OWNERSHIP!**

This is thanks in part to the damage done by the inferior quality build, mentioned previously, and also not getting anywhere near the original brands rated and stated page yields.

### 3 | **NOT A GREEN SOLUTION!**

These new build clones can't be remanufactured or reused due to the poor quality plastic and end up clogging landfills. Not to mention the negative impact on the environment from manufacturing the new cartridges vs. reusing the OEM build.

### 4 | **PUTS YOUR COMPANY AT RISK!**

New build clone cartridges may infringe on original brands patents, putting you and your company at risk.

**Our remanufactured cartridges are guaranteed to be on par with the original brands. Don't sacrifice quality for cost. Get the cartridges that offer you both!**
